

Medical Records Release – Mammography Studies

Effective April 28, 1999, the United States Food and Drug Administration implemented the final regulations of the Mammography Quality Standards Act. These regulations require facilities performing mammography to track each patient through subsequent breast-related studies to ensure that each patient receives the recommended treatment and follow-up care. In order to comply with the regulation, it will be necessary for us to obtain medical records reflecting the status of each patient. For this reason, we request that you authorize the release of such information indicated by your signature below.

All medical information and records will be kept confidential and will become a permanent part of your medical record at this facility. Thank you for your cooperation.

I hereby authorize Teton Radiology Diagnostics, LLC, dba Teton Radiology, and its representatives to request and receive any medical reports, pathology, histology, cytology and otherwise helpful information with respect to mammography studies and the tracking of such studies for compliance purposes.
